

IN THE CLAIMS

Please amend claims as follows.

For the Examiner's convenience, all pending claims are included below.

What is claimed is:

1. (Currently Amended) A computer-implemented method for selecting an optimal balance between direct cost and a number of suppliers comprising:
 - soliciting bids from a plurality of suppliers for a plurality of lots;
 - receiving at least one bid from a the plurality of suppliers for each lot;
 - storing the bids from each supplier in a database; and
 - upon completion of bidding for the plurality of lots, generating at least a first and second optimal solution from the bids in the database without user interaction, the first optimal solution having a different number of suppliers than the second optimal solution.
2. (Previously Presented) The method of claim 1 wherein the generating comprises:
 - inputting the bids into an optimization routine, including
 - selecting the number of suppliers for each optimal solution,
 - determining lowest bids received from the number of suppliers for the lots for each optimal solution,
 - calculating a direct cost from the lowest bids received from the number of suppliers for each optimal solution, and
 - providing each optimal solution to a buyer.
3. (Original) The method of claim 1 wherein the generating comprises:
 - choosing a minimum cost; and
 - determining the optimal solution with a direct cost being at least the minimum

cost.

4. (Original) The method of claim 1 wherein the storing comprises:

removing the bids from at least one undesired supplier.

5. (Original) The method of claim 4 wherein the generating comprises:

providing the optimal solution with lowest bids from the suppliers other than the at least one undesired supplier.

6. (Original) The method of claim 1 wherein the storing comprises:

choosing the bids from at least one preferred supplier.

7. (Original) The method of claim 6 wherein the generating comprises:

providing the optimal solution with lowest bids from the at least one preferred supplier for the lots on which the at least one preferred supplier bid lower than other suppliers and lowest bids from the other suppliers for the lots on which the at least one preferred supplier did at least one of not bid and not bid the lowest bid.

8. (Original) The method of claim 1 wherein the generating comprises:

ranking the bids in accordance with cost.

9. (Original) The method of claim 1 wherein the soliciting comprises:

identifying at least one of goods and services to be purchased.

10. (Original) The method of claim 1 further comprising:

displaying at least one of the first and second optimal solutions.

11. (Original) The method of claim 1 wherein the generating comprises:

assigning an integer value to each lowest bid in each lot.

12. (Previously Presented) The method of claim 1 wherein the receiving comprises:

submitting bids from

a first supplier that bid on at least one of a first lot, a second lot, a third lot and a fourth lot,

a second supplier that bid on at least one of the first lot, the second lot, the third lot and the fourth lot,

a third supplier that bid on at least one of the first lot, the second lot, the third lot, and the fourth lot, and

a fourth supplier that bid on at least one of the first lot, the second lot, the third lot, and the fourth lot.

13. (Previously Presented) The method of claim 12 wherein the generating comprises:

calculating the first and second optimal solutions, including

the first optimal solution, having a first cost, for three suppliers, the first optimal solution listing the first supplier as a provider for at least one of the first, second, third and fourth lots and having a first cost, the third supplier as the provider for at least one of the first, second, third, and fourth lots, and the fourth supplier as the provider for at least one of the first, second, third and fourth lots, and

the second optimal solution, having a second cost, for two suppliers, the second optimal solution listing the third supplier as the provider for at least one of the first, second, third, and fourth lots, and the fourth supplier as the provider for at least one of the first, second, third and fourth lots.

14. (Original) The method of claim 1 further comprising: selecting one of the optimal solutions.

15. (Currently Amended) A computer-implemented method for selecting an optimal balance between direct cost and a number of suppliers, comprising:

identifying at least one of goods and services to be purchased;

soliciting bids from a plurality of bidders for a plurality of lots;

receiving at least one bid from a the plurality of suppliers for each lot;

storing the bids from each supplier in a database;

upon completion of bidding for the plurality of lots, inputting, without user interaction, the bids into an optimization routine, including

selecting the number of suppliers for at least a first and second optimal solution;

determining lowest bids received from the number of suppliers for the lots for each optimal solution;

calculating a direct cost from the lowest bids received from the number of suppliers for each optimal solution;

displaying each optimal solution; and

choosing one of the optimal solutions.

16. (Currently Amended) A system for selecting an optimal balance between direct cost and a number of suppliers comprising:

a database for receiving and storing bid information from a plurality of suppliers for a plurality of lots; and

software for generating, upon completion of bidding for the plurality of lots, at least a first and second optimal solution from the bid information without user

interaction, the first optimal solution having a different number of suppliers than the second optimal solution.

17. (Original) The system of claim 16 wherein the bid information comprises at least one bid from a supplier for each lot.

18. (Original) The system of claim 16 wherein at least one of the first and second optimal solutions comprises a chosen supplier for each lot.

19. (Currently Amended) A machine readable medium that selects an optimal balance between direct cost and a number of suppliers comprising:

a first machine readable code that receives and stores bid information from a plurality of suppliers for a plurality of lots;

a second machine readable code that generates at least a first and second optimal solution from the bid information without user interaction, upon completion of bidding for the plurality of lots, the first optimal solution having a different number of suppliers than the second optimal solution; and

a third readable code that transmits the optimal solutions to a buyer.

20. (Original) The machine readable medium of claim 19 wherein the bid information comprises at least one bid from a supplier for each lot.

21. (Original) The machine readable medium of claim 19 wherein at least one of the first and second optimal solutions comprise a chosen supplier for each lot.

22. (Original) The machine readable medium of claim 19 wherein the bid information comprises: at least one bid on a first, second, third, and fourth lot from a first supplier;

at least one bid on the first, second, third, and fourth lots from a second supplier, at least one bid on the first, second, third, and fourth lots from a third supplier, and at least one bid on the first, second, third, and fourth lots from a fourth supplier.

23. (Original) The machine readable medium of claim 22 wherein the first and second optimal solutions comprise: the first optimal solution, having a first cost, for three suppliers, the first optimal solution listing the first supplier as a provider for at least one of the first, second, third and fourth lots and having a first cost, the third supplier as the provider for at least one of the first, second, third, and fourth lots, and the fourth supplier as the provider for at least one of the first, second, third and fourth lots; and the second optimal solution, having a second cost, for two suppliers, the second optimal solution listing the third supplier as the provider for at least one of the first, second, third, and fourth lots, and the fourth supplier as the provider for at least one of the first, second, third and fourth lots.
